

22 Days to the Exam

Day 1 = Mon 5 Oct 2026 · Day 22 = Mon 26 Oct · Exam: Tue 27 Oct (confirm on your admit card / official RRB site)

How this plan works

- **One file per day** (Day01_Plan.pdf ...). Each has the schedule, a recall test on yesterday, maths and reasoning methods, a science chapter with diagrams, a practice set and answers. Open only today's file.
- **Maths and Reasoning come first every day** — they are 55 of the 100 CBT-1 questions (if the old pattern holds).
- **5 full mocks** on Days 8, 15, 19, 20 and 21. A mock without analysis is wasted — analysis is part of the session.
- **Behind schedule?** Never try to 'catch up' two days at once. Do today's Maths + Reasoning, skip the missed science, and tell me — I'll re-plan.

Accuracy note

Pattern assumed (from previous RRB JE CBT-1 notifications — **verify against your current CEN**): 100 questions in 90 minutes · Maths 30 · Reasoning 25 · General Awareness 15 · General Science 15 · 1/3 mark deducted per wrong answer. Topic priorities below are my judgement from the syllabus and common question types — I'll re-rank them once you send PYQ papers.

Daily routine

Block	Time	Rule
0 · Recall	15 min	Yesterday's 10 questions + redo yesterday's mistakes. First thing, every day. Non-negotiable.
1 · Maths	75 min	Read the method (10 min) → 2–3 timed book questions per pattern → log mistakes
2 · Reasoning	50 min	Learn the method (10 min) → 15 timed questions → log
3 · Science	50–60 min	Lessons + quick checks → 20-question practice set
4 · Current affairs	20 min	20 MCQs from the monthly PDF — questions only, no reading cover to cover
5 · Close	10 min	Redo today's wrong questions · 3 rules for tomorrow · send me your scores

About 4 hours. Short on time? Cut in this order: current affairs → science → reasoning. **Never cut recall or maths.**

Speed targets: Maths 60–70 sec per question · Reasoning 35–45 sec · Science and GA 15–20 sec.

22-day master plan

Day	Date	Maths	Reasoning	Science
1	Mon 5 Oct	Percentage	Number series	Physics: units, measurement & motion
2	Tue 6 Oct	Ratio & proportion, partnership	Alphabet series	Physics: force & laws of motion
3	Wed 7 Oct	Profit, loss & discount	Analogy	Physics: work, energy, power, gravitation
4	Thu 8 Oct	Simple & compound interest	Classification	Physics: pressure, fluids, matter, heat
5	Fri 9 Oct	Number system	Coding-decoding	Physics: waves & sound
6	Sat 10 Oct	LCM & HCF, simplification, surds	Blood relations	Physics: light
7	Sun 11 Oct	Average + ages	Direction sense	Physics: electricity, magnetism, inventions
8	Mon 12 Oct	FULL MOCK 1 (90 min) + analysis (45 min)	(in mock)	Physics revision: 7 summaries + mistake log
9	Tue 13 Oct	Time & work, pipes & cisterns	Order & ranking, dictionary order	Chemistry: matter, atomic structure, periodic table, bonding
10	Wed 14 Oct	Time, speed & distance; trains; boats	Mathematical operations, missing numbers	Chemistry: reactions; acids, bases & salts
11	Thu 15 Oct	Mixture & alligation	Venn diagrams, syllogism	Chemistry: metals, non-metals, metallurgy, alloys
12	Fri 16 Oct	Mensuration 2D	Statement-conclusion, data sufficiency	Chemistry: carbon compounds + everyday chemistry
13	Sat 17 Oct	Mensuration 3D	Seating arrangement	Biology: cell, tissues, classification, microbes & diseases

Day	Date	Maths	Reasoning	Science
14	Sun 18 Oct	Algebra	Puzzles	Biology: nutrition, digestion, vitamins & minerals
15	Mon 19 Oct	FULL MOCK 2 + analysis	(in mock)	Chemistry revision
16	Tue 20 Oct	Geometry: triangles, circles, polygons	Mirror/water images, paper folding, embedded figures	Biology: human body systems
17	Wed 21 Oct	Trigonometry + heights & distances	Figure counting, dice & cubes	Biology: plants, genetics, evolution, environment
18	Thu 22 Oct	Statistics/DI + calendar & clock	Word formation, decision making	Biology revision
19	Fri 23 Oct	FULL MOCK 3 + analysis	Weak-topic drill (from mocks)	Science traps: physics + chemistry
20	Sat 24 Oct	FULL MOCK 4 + analysis	Weak-topic drill	Science traps: biology + inventors
21	Sun 25 Oct	FULL MOCK 5 + analysis	Weak-topic drill	Current affairs: last 6 months recap
22	Mon 26 Oct	Formula sheet only (60 min)	Mistake log only (45 min)	1-page summaries only (45 min) · sleep by 10:30 pm

If your weekends are freer than Mondays, swap Day 7 ↔ Day 8 and Day 14 ↔ Day 15 so the mocks fall on Sundays.

Important topics — priority list

Essential = high frequency, quick to score — never skip. **Important** = regular, do well.

Useful = appears sometimes — do once. **Low** = skip unless time is left. (My ranking; PYQs will refine it.)

Maths (30 questions)

Priority	Topics
Essential	Percentage · ratio & proportion · profit, loss & discount · simple & compound interest · time & work · time, speed & distance · number system · simplification (BODMAS) · average
Important	Mensuration 2D & 3D · algebra identities · trigonometry (standard values, identities) · geometry (triangles, circles) · LCM & HCF · ages
Useful	Mixture & alligation · pipes & cisterns · boats & streams · statistics (mean, median, mode) · heights & distances · calendar & clock
Low	Long data-interpretation sets · rare advanced geometry theorems

Reasoning (25 questions)

Priority	Topics
Essential	Number & alphabet series · analogy · classification · coding–decoding · blood relations · direction sense · mathematical operations
Important	Order & ranking · syllogism · Venn diagrams · missing numbers · statement–conclusion · seating arrangement
Useful	Mirror & water images · paper folding · figure counting · dice · data sufficiency · word formation
Low	Long multi-variable puzzles (attempt last in the exam)

General Science (15 questions)

Priority	Topics
Essential	Units & instruments · laws of motion · light (mirrors, lenses, eye) · electricity · acids, bases & salts · common names & formulas · vitamins & deficiency diseases · human body systems · cell
Important	Work, energy, gravitation · sound · heat · periodic table · metals & alloys · carbon compounds · diseases & pathogens · plant hormones · inventors & discoveries
Useful	Fluids & pressure · magnetism · genetics basics · ecology & environment
Low	Deep derivations · advanced organic chemistry

General Awareness (15 questions)

Priority	Topics
Essential	Current affairs of the last ~6 months: government schemes, appointments, awards, sports events, summits, important days, India's rankings
Important	Static GK that repeats: national parks, dances, first-in-India, books & authors, Indian Railways facts, constitution basics
Useful	History and geography facts — only those that appear in PYQs
Low	Full history or polity textbooks — too slow for 22 days

Must-do sessions — non-negotiable

#	Session	When	Why
1	Recall test (10 Qs on yesterday)	Every day, first 15 min	Spaced recall is what makes 22 days of material stick
2	Mistake log	Every day, last 10 min	Your mistakes predict your exam losses better than anything else
3	Timed practice (not untimed)	Every maths and reasoning block	CBT-1 is a speed test: 90 sec per question on average
4	Current-affairs MCQs	Every day, 20 min	Cheapest GA marks
5	Full mock + analysis	Days 8, 15, 19, 20, 21	Builds exam stamina, question selection and negative-marking judgement
6	Formula sheet revision	Every 3rd day, 15 min	Formulas fade fastest
7	Send me your scores	Every evening	I update your weak-topic list and tomorrow's recall from them
8	Sleep 7 hours	Every night, especially Days 21-22	Memory consolidates during sleep; tiredness costs accuracy

How to analyse a mock (45 min)

Step	What to do
1	Score: correct, wrong, unattempted, net (correct – wrong/3) for each section
2	For every wrong answer: tag it — concept / formula / calculation / misread / careless / guessed
3	For every skipped question: could you have solved it in under 90 seconds? If yes → it's a speed problem, not a knowledge one
4	Check time per section — where did you lose minutes?
5	Pick the 3 topics that cost the most marks → they become the next 'weak-topic drill'

Exam strategy (practise it in every mock)

Rule	Detail
Two rounds	Round 1: answer everything you can in under 60 sec, skip the rest. Round 2: return to the skipped ones.
Guessing with negative marking	A blind guess (1 in 4) has zero expected value: $\frac{1}{4} - \frac{3}{4} \times \frac{1}{3} = 0$ — it only adds risk. Eliminate 1 option → slightly positive (+1/9 mark); eliminate 2 → clearly positive (+1/3 mark). So guess only after eliminating at least one, ideally two, options.
Suggested order	General Science → GA (fast, 20 min) → Reasoning (25 min) → Maths (40 min) → review (5 min). Test this in your mocks and keep what works for you.

Your target

You haven't told me your target score yet. Until you do, here is an **illustrative** split for a strong net score (this is not an official cutoff — cutoffs vary by year, zone and category, and I won't guess them):

Section	Questions	Aim to attempt	Aim correct	Net ($-1/3$ per wrong)
Maths	30	27	24	$24 - 1 = 23$
Reasoning	25	24	22	$22 - 0.7 \approx 21.3$
General Science	15	13	11	$11 - 0.7 \approx 10.3$
General Awareness	15	11	8	$8 - 1 = 7$
Total	100	75	65	≈ 61.7

Tell me your target and I'll re-balance the daily time to hit it.

What I need from you

#	Item	Why it matters
1	Your target score and whether this is CBT-1 or CBT-2 (and your discipline if CBT-2) · CEN number	Decides the whole syllabus and time split
2	RRB JE CBT-1 previous papers (PDFs of any shifts — 2019 and any recent ones)	I'll count topic frequency and re-rank every priority list from real data
3	Name of the monthly current-affairs PDF you use	So the GA block matches it
4	Your maths book (name/publisher)	I can point to exact exercises per pattern
5	Which mock-test platform you have (Testbook, Adda247, Oliveboard ...) — or none	If none, I'll prepare full mocks for Days 8, 15, 19–21
6	Hours available on weekdays and weekends	So no day is planned longer than you actually have
